

MILLION GIRLS MOONSHOT
A STEM NEXT INITIATIVE

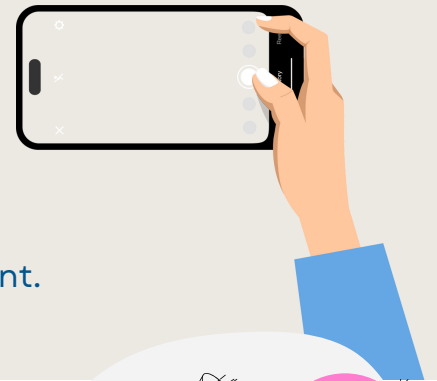

Inspire the next generation. Be a Role Model.

1 Set-Up Your Space

Record horizontally, in a quiet place, on a smartphone, or computer (e.g. Zoom, etc.).

Set your device up in a stable place to avoid movement.

2 Tell Your Story

You are the expert of your STEM journey.
Share what you do and how you got there.

Some Ideas to Get You Started

Tell us a unique story along your career pathway.

Are you the first in your family to work in a STEM career? Were you insecure about your math skills growing up, but use them daily and joyfully today? Do you find yourself working in tech, despite having no clear pathway there?

Speak directly into the camera, like you are talking to youth, and communicate your experiences.

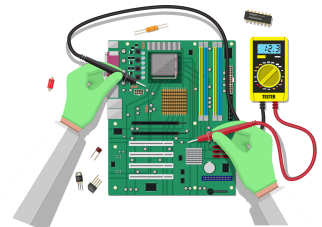

Chat with a colleague or friend on camera.

Have a conversation with another about your STEM experiences. Compare career pathways. Share more about your early interest in STEM.

Demonstrate your skills.

Film yourself putting together a phone. Demonstrate an engineering concept. Test your hypothesis with us.

“For girls, it’s important for them to see other women in STEM so they don’t assume that ‘only guys do that’ or ‘it’s impossible because I’m a girl.’ It’s important for students to have role models to give them more options when thinking about future careers.”

-Orietta Verdugo, Intel

Upload Your Influence

Drop us your video file and celebrate!

Our team will add music, and logos. Then share your video with STEM programs nationwide.

Email your video to info@milliongirlsmoonshot.org if you experience issues uploading.

Questions? Contact Veronica Gonzales at vgonzales@stemnext.org

THANK YOU!

Young people, in all 50 states, will learn from your distinct STEM experiences and become motivated about what is possible for their own lives.

Create big outcomes for kids everywhere with just a few minutes of your time.
